

RFQ And Sourcing Stage Preview Guide

Purpose

The **All RFQs** page includes read-only examples showing how **PR-2026-1001** appears throughout the sourcing lifecycle. These examples let the Procurement Officer inspect later screens without changing the live Purchase Request.

LIVE PROTOTYPE

<https://lcfajarda-lifecollege.github.io/procurement-frontend-prototype/>

How To View The Previews

- 1 Open the procurement prototype.
- 2 In **View As**, select **Procurement Officer**.
- 3 Open **RFQ & Sourcing** from the sidebar.
- 4 If the Procurement Review screen is open, select **Back to all RFQs & Sourcing**.
- 5 Review the rows associated with source **PR-2026-1001**.
- 6 Select any row marked **Stage preview · Read only** to inspect that stage.

The previews are intentionally hidden when **View As** is set to **Super Admin** or another role. They appear only in the Procurement Officer view.

Available Stages

- **For Procurement Review**
- **RFQ Draft**
- **RFQ Sent**
- **Quotations Received**
- **For DT Approval**
- **For Requester Selection**
- **Ready for PO Creation**

Live Record Versus Preview

The unmarked **PR-2026-1001** row is the live record. Actions completed on that row advance the actual prototype workflow and update its activity history, notifications, and assigned role.

Rows marked **Stage preview · Read only** are demonstrations. They:

- Use **PR-2026-1001** as the source record.
- Show the information and layout expected at a specific stage.
- Do not change the live Purchase Request.
- Do not create approvals, notifications, vendor awards, or Purchase Orders.
- Do not save edits made inside a preview.

Troubleshooting

If the preview rows are not visible:

- 1 Confirm that **View As** is set to **Procurement Officer**, not **Super Admin**.
- 2 Confirm that you are on the **All RFQs** list rather than inside Procurement Review.
- 3 Refresh the page once to load the latest GitHub Pages deployment.
- 4 Search for **PR-2026-1001** if a list filter or search term is active.
